

1. Utilizando un hosting gratuito (como por ejemplo <https://es.000webhost.com/>) despliega una aplicación web PHP de las realizadas en el módulo “Desarrollo web en entorno servidor” que se conecte a una base de datos. Deberás crear la base de datos con las tablas y registros que requiera la aplicación web, utilizando las herramientas que ponga a tu disposición el hosting gratuito elegido, y desplegar la aplicación web desarrollada de tal forma que se pueda acceder a ella desde cualquier ordenador conectado a Internet.

Creamos la Nueva base de datos

The screenshot shows the 000webhost database management interface. The browser address bar displays `es.000webhost.com/members/website/IVMarcos/database`. The top navigation bar includes links for "My Sites", "Power Store", and "Help", along with the 000webhost logo and an "Upgrade" button. The user's name "ivanmarcos97" is visible in the top right corner. On the left sidebar, under the "Tools" section, the "Database Manager" link is highlighted with a red underline and a mouse cursor. The main content area is titled "My Databases" and features a "+ New Database" button and a "0/2" indicator. Below this is a table with columns "DB Name", "DB User", and "DB Host", which currently contains the message "You have not created any databases yet." To the right, the "Database Manager" section provides instructions on how to create and manage databases, including limits (1GB space, 100 tables) and the default database name `databases.000webhost.com`. A purple chat bubble icon is located in the bottom right corner of the interface.

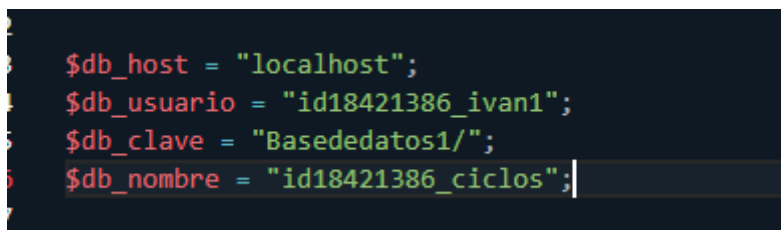

The screenshot shows the "Create new database" modal form. The form has three input fields: "Database name" with the value "CICLOS", "Database username" with the value "Ivan1", and "Password" with the value "Basededatos1/". Below the password field are links for "Hide Password" and "Randomize". A "Create" button is located at the bottom right of the modal. The background shows a blurred view of the 000webhost interface, including the "Database Manager" section.

Creamos e insertamos las tablas de la base de datos

Editamos los documentos con el nombre, clave y usuario de la base de datos.
